Bluelake Software
Kofax to Laserfiche Export Connector

Overview

Bluelake Software's *Kofax to Laserfiche Export Connector*, formerly known as a Release Script, exports documents from Kofax Capture during the Kofax Export step. It is compatible with Laserfiche versions 7.2 through 10.x, and Kofax versions 7.x through 10.x.

Point and click configuration options include mapping individual Kofax Capture meta-data fields to Laserfiche Template fields, and dynamically naming documents and folders in Laserfiche based on meta-data values. Support is also included for multi-instance fields in Laserfiche, mapping from table fields in Kofax.

Kofax to Laserfiche Export Connector – Key Features

- Point and click configuration

- Support for multi-instance meta data fields

- Dynamic Document Naming based on meta data fields.

- Dynamic Folder Naming based on meta data fields.

- Optional concurrent release of text-based file(s) in a variety of formats, for updating other systems.

System Requirements:

The Kofax to Laserfiche Direct Export Connector requires Laserfiche 8.1 or above and Kofax 7 or above.

Before installation of the Export connector, the Laserfiche client software must be installed on the Export station, and be able to successfully connect to the desired Laserfiche repository.

While executing, the Export Connector will consume a Laserfiche Named User (Avante) or Full User license, as well as a Kofax Full Station or Concurrent station license. These licenses can be shared with existing user functions taking place on the workstation or server.

Download and Installation:

A demo download is available www.bluelake.com/Products under the Laserfiche-Related Apps and Utilities section. The demo version is limited to 30 days or 100 documents and can be easily extended upon request. Licensing is done on a per-machine basis (typically only one Export station would be needed).

After install, Configuration and User Instructions are available under *Start, All Programs, Bluelake Software, Kofax to Laserfiche Export*.

Alternate Product

The Kofax to Laserfiche Export Connector is intended for use in facilities where Kofax and Laserfiche are both accessible at the time of export out of Kofax. In a service bureau or other context where Laserfiche is not directly accessible from the Kofax environment, we have an alternate product, *Bluelake Laserfiche Import*.

Bluelake Laserfiche Import will take files exported from Kofax's own Text Release, and import them into Laserfiche with the same dynamic document and folder capabilities, along with support for multi-instance fields. Please go to www.bluelake.com/ Products under the Laserfiche-Related Apps and Utilities section for more information and a download of Bluelake Laserfiche Import.

Pricing

We offer discount pricing to Laserfiche and Kofax resellers – please contact us for details.
