

## Bluelake Utilities for Kofax Ascent Capture: Edit Index Fields in the Ascent Capture Quality Control Module

The Bluelake Document Indexing Utility for Kofax enables editing of document index values (meta data) from within the Ascent Capture Quality Control Module. It is particularly useful in Kofax Ascent Capture workflows that feature automated validation, where exceptions are routed to Quality Control. Exception handling, including editing of index values, can be completed within Quality Control without having to reroute documents through the Validation queue.

### Example:

Users can simply right click on a document within the Ascent Capture Quality Control module and select "Edit Document Data" to bring up the list of index values for the document.
